

New 220V/15V/12V/5V electric ac fan motor for sale

New 220V/15V/12V/5V electric ac fan motor for sale is a widely used universal small AC motor, mainly used for heat dissipation in electronic products and other products with ventilation and heat dissipation requirements.

The new 220V/15V/12V/5V electric ac fan motor has the advantages of small size, high torque, low noise, full speed ratio, high transmission efficiency, and low energy consumption.

There are many types of New 220V/15V/12V/5V electric ac fan motor for sale is a widely used universal small AC motor, mainly used for heat dissipation in electronic products and other products with ventilation and heat dissipation requirements., such as centrifugal, axial flow, through flow, etc.

Usage: AC motors can be used as heat dissipation fans, generally used in electronic products with high heat dissipation requirements, such as computer hosts, CPUs, etc.

New 220V/15V/12V/5V electric ac fan motor for sale can be used in various fields, such as ordinary asynchronous motors that operate in a single direction for a long time, reversible motors that can achieve forward and reverse rotation, electromagnetic brake motors, clutch brake motors, torque motors, etc. At the same time, various specifications of motors from 6W to 200W are produced.
